

Applications

Discover what is possible

Compatible with various irrigation systems
Up to 5.8 bares pressure

Water supply for livestock
Up to 7 km from the water source

Water oxygenation for fish farming
In combination with vegetable growing (fertilization)

Pumping to a reservoir at the top of the farm
Then use gravity to improve irrigation uniformity

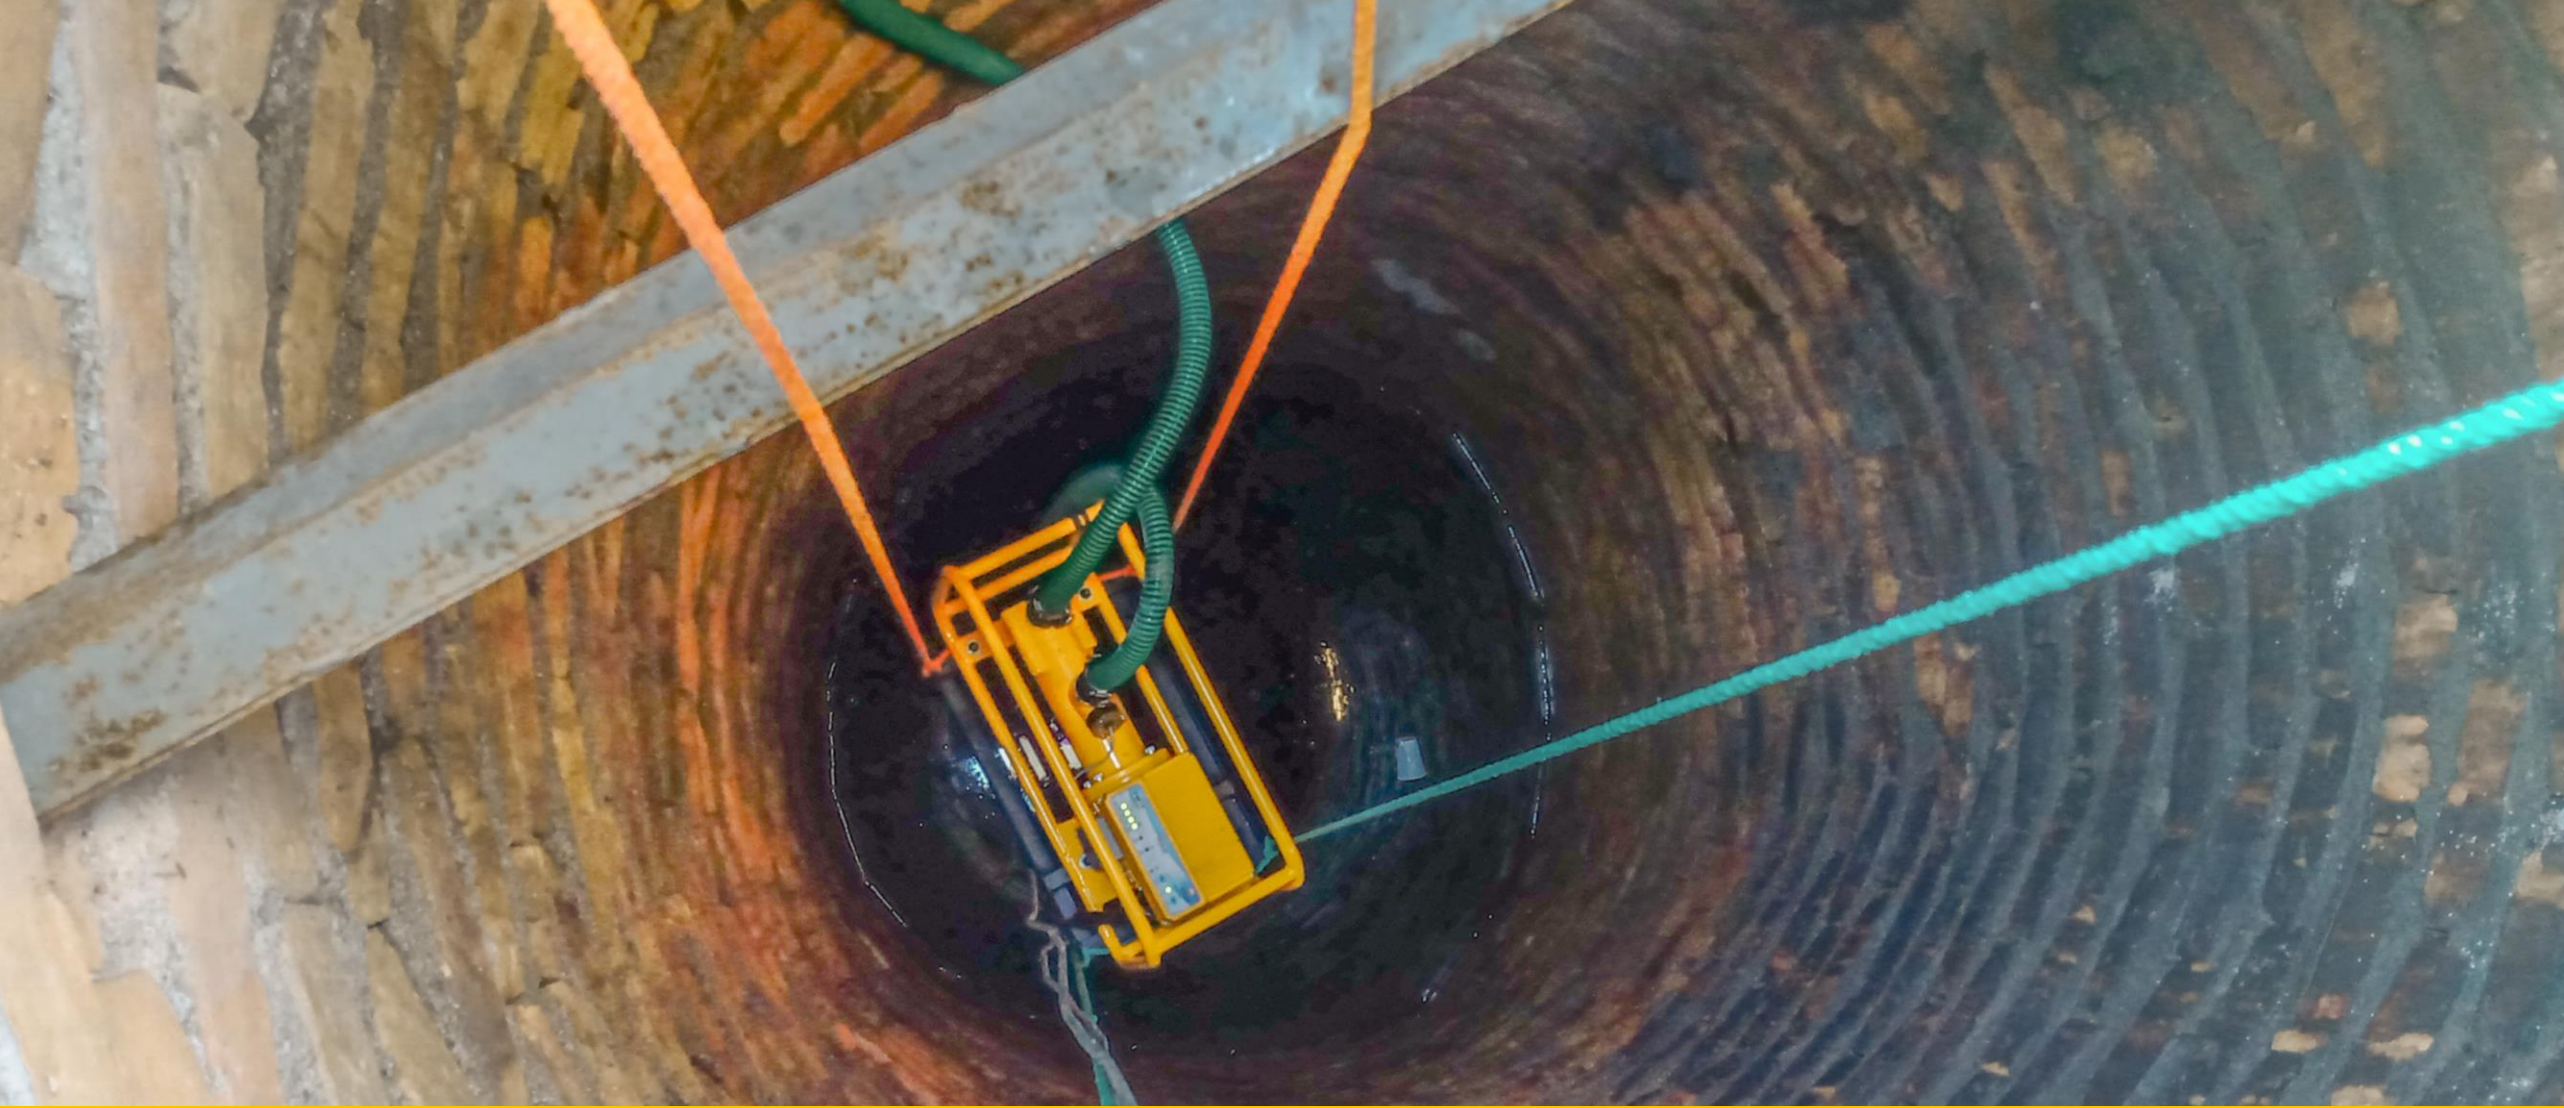

Reservoirs are also used to store water
For night-time gravity irrigation, instead of using batteries

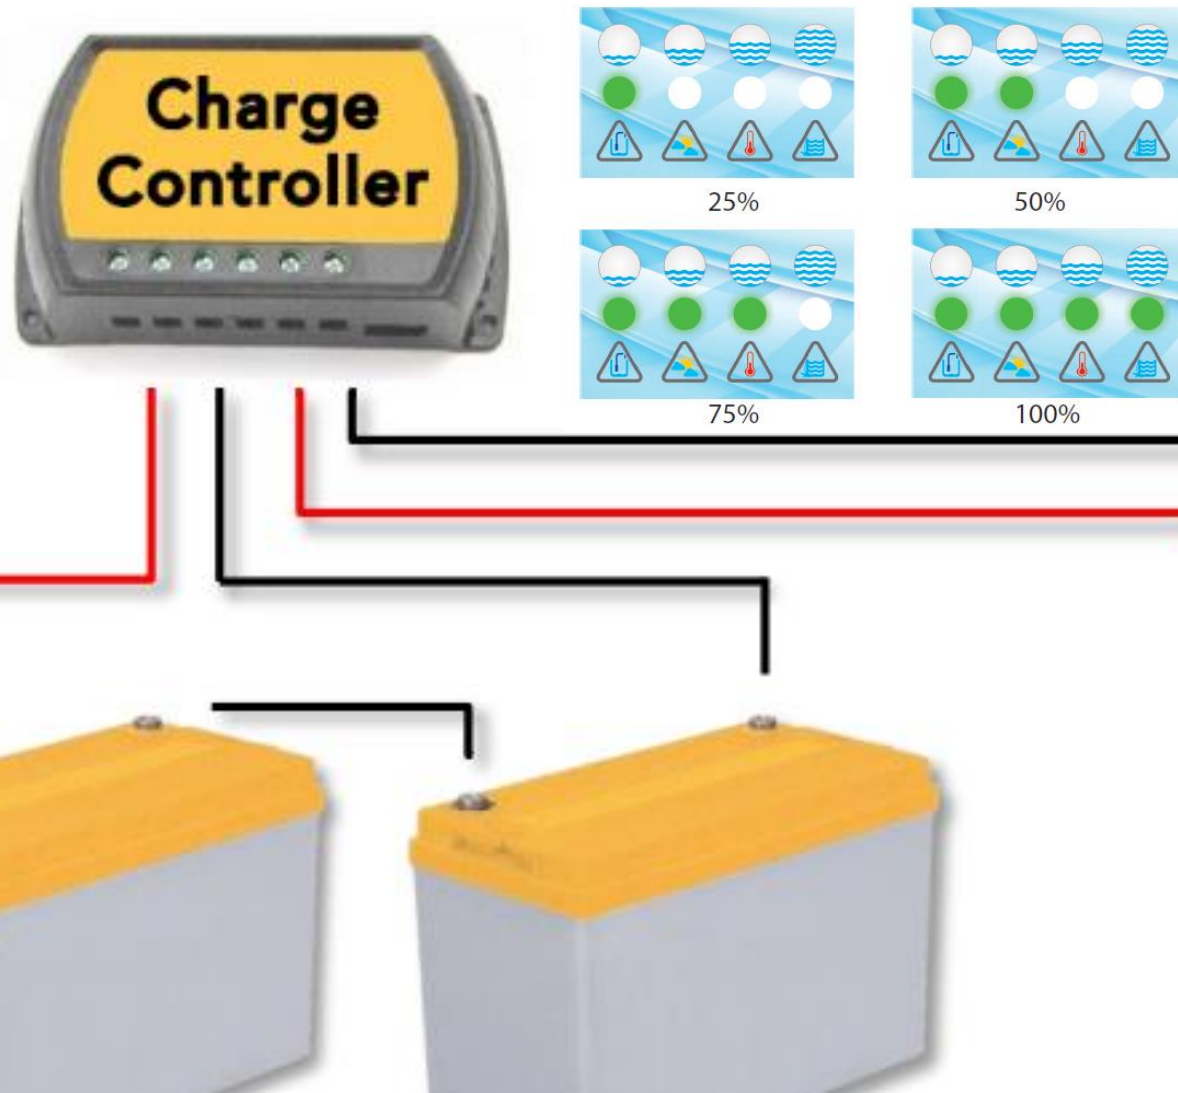

Ideal for surface water source
Pond, river, canal, lake, shallow well

Can also works in deep wells
On a fixed or floating platform

Can be used with batteries on manual mode (4 speeds)
Consider higher investments due to batteries as additional costs

Easy coupling for quick installation/uninstallation
More mobility & security in the field

Fully mobile design with trolley
Move pump and solar panel to where you need them

ennos App for Android

For accessing datas such as pump performance, troubleshooting and registration
